

Fidelis Network Cloud

All of the benefits of Fidelis Network delivered from the cloud and sold as a subscription.

Overview

Get the visibility, context and speed required to identify threats and ensure data theft never happens, with Fidelis Network™, from the cloud. You deploy the Fidelis sensors on your network while the Fidelis Command Post and Collector are hosted from the Fidelis Cloud where we ensure they are performing optimally and always up to date.

FIDELIS NETWORK CLOUD ARCHITECTURE

How It Works

Your team accesses the hosted management console to evaluate alerts, obtain forensics and conduct incident response using rich historical metadata. The service communicates with the sensors through a secure tunnel. Software included with Fidelis Network Cloud includes:

- **Sensors:** Analyzes network traffic across all ports and protocols using our patented Deep Session Inspection® engine.
- **CommandPost:** Create and edit sensor policies, craft metadata analytics and automation, and view alerts from connected sensor and Collector components.
- **Collector:** Captures rich metadata about your network traffic so you can detect attacks in the past and see what happened before and after an alert.
- **Fidelis Insight:** Continuously updates threat intelligence, rules and policies curated by the Fidelis Threat Research Team.
- **Cloud Sandbox:** Secure detonation and execution behavior analysis of suspicious objects and URLs.

Highlights

Low Maintenance: Infrastructure is maintained by Fidelis so you can focus on security.

Rapid Deployment: Fewer appliances to deploy means you can get Fidelis Network up and running fast.

Grow As Your Needs Change: Cloud-based model allows you to grow the solution as your needs change.

Instant: Transition from POC to production is seamless.

Simple Pricing: Subscription pricing approach is based on network bandwidth and days of storage.

All of the benefits of Fidelis Network delivered from the cloud and sold as a subscription.

Subscription Pricing

Fidelis Network Cloud uses a simple pricing approach that enables you to get started quickly and grow the solution as your needs change. Your cost is easily calculated with two simple data points. You tell us your *Aggregate Peak Monitored Bandwidth* and *How Many Days of Metadata Storage* you want. We give you a price.

FIDELIS NETWORK CLOUD PRICING APPROACH

List Price (Annual Subscription)	Aggregate Peak Protected Bandwidth											
	250	500	750	1	2	3	4	6	8	10	...	
Days of Metadata Retention	30											
	60				\$							
	90											
	120											
	180											
	...											

Simple pricing approach makes it easy to add storage and capacity as your needs change.

Securing Your Data

- Data protected in transit by TLS 1.2 encryption for all sensor to cloud connections.
- Separate client instances, not multi-tenant.
- Each Fidelis Network Cloud instance is isolated with its own firewalled virtual network.
- All CommandPost data is protected and encrypted in your cloud instance.
- Industry competitive SLAs for infrastructure uptime and cloud services.

Support

Fidelis Network Cloud comes with industry-standard SLAs and uptime guarantees. You have 24x7 access to our support professionals so you can get the assistance you need.

How We Work Together

With Fidelis Network Cloud Fidelis maintains the infrastructure so you can focus on your core mission — protecting your organization. You retain full control over the application and your data with the confidence that the latest version of Fidelis Network is always running and available.

FIDELIS

Manage and maintain the infrastructure.

Provision and maintain application

Install software updates and patches

Monitor and maintain application

Provide ongoing support

Deliver and update Fidelis intelligence feed

CUSTOMER

Run the application. Manage your alerts and data.

Position Fidelis sensors in your environment

Manage your alerts

Maintain custom policies

Manage custom feeds
