

How To Suppress A Dpi Rule

If you find any of the rules no longer desired, you may suppress the rule by following these instructions.

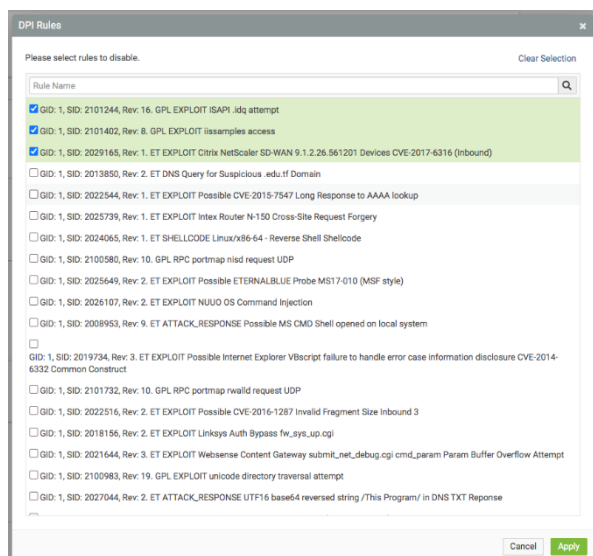

On CommandPost, visit the [DPI Rules](#) link under Policies as show below.

This will bring up a view like that on the right.

This will allow you to make changes to the DPI rule set.

Clicking **Add** will bring up a list of rules currently active on the sensor as show on the left below.

Simply search for the name of the rule and check the box beside it. Then hit **apply** and the rule will be added to a suppression list and the rule will no longer be active.

The view on the left is an example of 3 rules that are suppressed

DPI rules can be added and removed from this list as needed. Simply select the blue **X** to remove the rule from the suppression
