

QUICK START GUIDE Fidelis Deception® Decoy Server Appliance

www.fidelissecurity.com

## **1. System Overview**

Fidelis Deception appliance runs emulated and RealOS decoys. It connects to Trunk port and/or multiple flat networks and communicate with assets on the networks.

Fidelis Decoy Server reports deception alerts for all accesses to the decoys to your on-premises Fidelis CommandPost appliance or to a remote CommandPost. Your configuration will depend on which environment you are working with.

## 2. Documentation & References

Fidelis Network and Deception product documentation, appliance specifications, and instructions

can be found at <u>https://support.fidelissecurity.com</u> or through the **1** icon in the CommandPost user interface.

### **Appliance Default Passwords**

System	Account	Default Password	
Appliance Console	fidelis	fidelispass	
CommandPost User Interface	admin	system	
iLO	administrator	(printed on label, top of server)	

#### **Technical Support**

For all technical support related to this product, check with your site administrator to determine support contract details. For support of your product, contact your reseller. If you have a direct support contract with Fidelis Cybersecurity, contact the Fidelis Cybersecurity support team at:

- Phone: +1 301.652.7190
- Toll-free in the US: 1.800.652.4020 Use the customer support option.
- Email: <u>support@fidelissecurity.com</u>
- Web: https://support.fidelissecurity.com

#### **Decoy Server Setup Checklist**

Check	Fidelis Decoy Server – Appliance Requirements
	Appropriate rack space, power, and cooling (Appendix A)

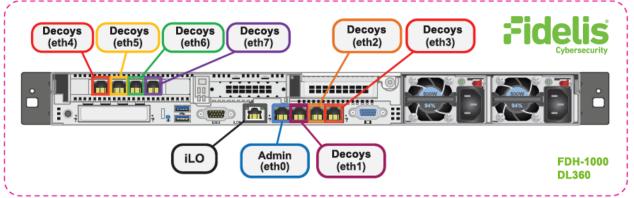

Rack tools, rails, and connectors
Keyboard and video monitor / KVM switch for temporary appliance setup
Power cables — two per appliance, appropriate for power source and region
Ethernet cables (cat5 and optical) for Admin, Monitor, and iLO ports (Section 3)
Network switches with enough physical ports (Section 4)
Optical transceivers for switches
Logical network information: IP addresses, hostnames (Section 5)

## 3. Sensor: Decoy Server Port and Cabling Requirements

Fidelis Decoy Servers must be connected to the various networks with appropriate cables and in some cases, SFP+ transceivers. The tables below describe the physical connection and cable type associated with each port on the appliance.

		Cable Type
Admin (eth0)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth1)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth2)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth3)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth4)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable (optional)
Decoys (eth5)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable (optional)
Decoys (eth6)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable (optional)
Decoys (eth7)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable (optional)
ILO	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable

### **Decoy Server Appliances With 1GbE rj45/Copper Ports**

#### Figure 2: Rear Port Assignments — Decoy Server

### **Decoy Server With 10GbE Optical Ports**

		Cable Type
Admin (eth0)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth1)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth2)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth3)	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable
Decoys (eth4)	LC Connector	Fiber SR Patch Cable, Multimode 850nM
Decoys (eth5)	LC Connector	Fiber SR Patch Cable, Multimode 850nM
Decoys (eth6)	LC Connector	Fiber SR Patch Cable, Multimode 850nM
Decoys (eth7)	LC Connector	Fiber SR Patch Cable, Multimode 850nM
ILO	8P8C "RJ45" (copper)	Cat 5/5e/6 patch cable

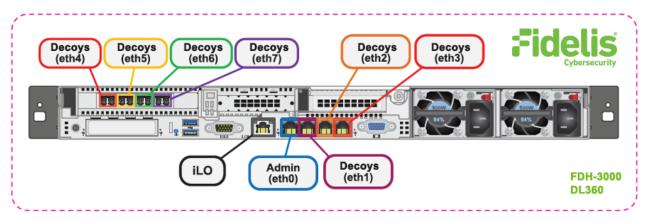

Figure 3: Rear Port Assignments — Decoy Server With 10GbE Optical Ports

## 4. Decoy Server Networking Environment

Decoy Server appliances may connect to multiple networks to deploy different decoy services. Decoys can operate whether ports are connected to trunk ports enabling to communicate on multiple subnets from the same port on the appliance, and/or to connect ports directly to specific subnets. Use the tables below to identify how many and what type of network switch ports you will need for your deployment.

### Admin Network

The Admin Network connects Fidelis Decoy Server to the CommandPost and optionally to the Sandbox. You need one switch port per Sensor appliance for the Admin network.

Appliance	Switch Port Type	Qty.
Decoy Server	8P8C "RJ45" (copper)	1

### Decoy ETH1, Decoy ETH2, Decoy ETH3

Ports to connect the Decoy Server appliance to subnets through network switch directly to certain subnets and/or using trunk port.

Appliance	Switch Port Type	Qty.
Decoy Server	8P8C "RJ45" (copper)	3

### Eth4/eth5/eth6/eth7 (additional ports)

Most environments using higher network throughput will be using these ports.

The Decoy Server can be connected to a trunk port and/or to certain subnets through the switch.

Appliance	Switch Port Type	Qty.
1GbE	8P8C "RJ45" (copper)	4
10-GbE	LC Connector	2

### **ILO Network**

Optional network for remote/out-of-band server administration. You will need one additional switchport for each ILO connection.

Appliance	Switch Port Type	Qty.
Decoy Server	8P8C "RJ45" (copper)	1

## 5. Decoy Server — Logical Network Configuration

The Admin and ILO should be configured according to your network configuration. See the table below as an example. The logical network configuration of the decoys is done as part of the decoys creation process.

Network Setting		Assignments	
Interface	Admin	ILO	
Hostname (FQDN)	DecoyServer1.myorg.int		
Static IP Address	10.1.2.3	10.2.3.4	
Subnet Mask	255.255.255.0	255.255.255.0	
Gateway	10.1.2.1	10.2.3.1	
Proxy Server	10.5.6.7		
DNS Servers	8.8.4.4, 8.8.8.8		
NTP Servers	0.pool1.ntp.org		
Time Zone	UTC (+0)		

## 6. Appliance Installation

#### **Rack Installation**

Install each appliance in an enclosure/location that has necessary power and cooling. Ensure that the installation environment is within the operating temperature of the appliance.

Refer to Appendix A for appliance operating temperature requirements.

#### Power

Connect power cables to the power supplies in the back of the appliance.

See **Appendix A** for appliance power specifications.

#### **Network Cabling**

Using the connectors and cables described in sections 3 and 4, begin to connect the appliances to the networks. Cable the Sensor appliances to the switches:

- 1. Connect Admin (eth0) port to the ADMIN switch port.
- 2. Connect the iLO port to the ADMIN (or ILO) switch port (optional).

### 7. Deception Appliance Configuration

- 1. Power on the Appliance(s).
- Connect to the component's CLI Via KVM Console or directly Connect a keyboard and monitor to the appliance.

#### **QUICK START GUIDE** Fidelis Deception<sup>®</sup> Decoy Server Appliance

For Fidelis Decoy Server appliance version 9.4
or later, the screen on the right is displayed:

Erase & Install deception server 9.4 Troubleshooting>	
Use the $\star$ and $\star$ keys to change the selection. Press 'e' to edit the selected item. or 'c' for a command prompt.	

- 3. If you see the screen above, perform the following steps to apply the software. Otherwise skip to step 4.
  - a. Click Enter.
  - b. Click enter again when you see the next screen to confirm the install; the software will be applied and the appliance is rebooting.

!!!Warning!!! - This will automatically erase all data	_
Use the $\bullet$ and $\bullet$ keys to change the selection. Press 'e' to edit the selected item. or 'e' for a command prompt. Press Ecosys to return to the previous mean.	

- 4. Login in to the system through console or ILO.
- 5. Use these credentials at the login prompt:

user: fidelis

default password: fidelispass

you will be required to change the password, pay attention to enter the default current (initial) password:

fss-dec login: fidelis Password: You are required to change your password immediately (root enforce Changing password for fidelis. (current) UNIX password: New password:	idelis Deception OS ernel 3.10.0-1062.18.1.el7.x86	5_64 on an	×86_64

## 8. Fidelis Decoy Server Integration — On Premises CommandPost Environments

### **Register Decoy Server Appliances with Your Fidelis Enterprise CommandPost**

- 1. Log into the CommandPost user interface from a web browser.
- 2. Navigate to the **Administration > Components** page.
- 3. Click Add Component Sensor.
- 4. Fill in the Add New Component form:

Component Type – Decoy Server Component Name — this is a user-friendly name for the Decoy Server, not the FQDN of the Sensor. Component IP address — the IP address of the ADMIN interface of the Decoy Server appliance Description — (optional) Specify a description, for example location, business unit, etc.

- 5. Click Save.
- 6. Click **Register** and accept the End User License Agreement (EULA). CommandPost will then communicate with the Decoy Server at the specified IP address.
